SUMMARY

Backend engineer with **2+ years** of experience at **Comcast** (including a 6-month internship), building event-driven microservices with **Clojure (JVM), Python, Apache Kafka, PostgreSQL** and **Elasticsearch**. Helped cut **$80K+** in annual software spend and was primary on-call for a core financial service. Since May 2026, building two open-source **GenAI** platforms that combine backend systems with LLM-based retrieval and agents.

EXPERIENCE

Comcast Jul 2024 – Apr 2026
Software Development Engineer 1 *Chennai, India*

- **Migrated the payback, labor-estimation and invoicing modules** from Salesforce to Comcast's in-house platform (Multipass), cutting **$80K+** in annual software spend.
- **Built an ETL pipeline with PGSync and Apache Kafka**: wrote the schema that maps PostgreSQL relations into search documents, added computed business fields in **Python**, and indexed them into Elasticsearch; dashboard sync under **400 ms**.
- **Owned the Payback Calculation engine** that reconciles fiber cost estimates against corporate Purchase Orders, eliminating calculation errors in payback estimates; wrote automated tests for the core logic.
- **Primary on-call for a core financial microservice (99.9% uptime SLA)** in a 15-service system; handled production alerts and fixed issues at service boundaries with schema validation and database constraints.

Comcast Jan 2024 – Jun 2024
Software Development Engineer Intern *Chennai, India*

- **Wrote health-check and dependency-verification scripts** for 5 production services, making release runs **30%** faster.
- **Built REST API endpoints** and fixed staging integration bugs; automated sprint reporting with a Jira API dashboard, saving **5+ engineer-hours per sprint**.

INDEPENDENT PROJECTS — BACKEND & APPLIED GENAI

Built full-time after Comcast; both open source on GitHub May 2026 – Present

SENTRI — AI Log Triage & Root-Cause Analysis (github.com/GokulAjithV/sentri)

- **Built an event-driven pipeline** that ingests application logs through **Apache Kafka**, groups repeated anomaly bursts, and routes alerts to on-call engineers over Slack and Email.
- **Built a RAG agent on LangGraph** that pulls related logs from OpenSearch (by service and trace ID) and similar code from ChromaDB, then writes a structured root-cause report (hypothesis, confidence, suggested fix); shipped an async Python SDK (aiokafka) so services can send logs without blocking.

CREASE — Live Cricket Scoring & AI Scouting (crease-lens.vercel.app)

- **Built a FastAPI backend** with REST APIs for ball-by-ball scoring (legal-ball counting, over and innings completion, undo of the last ball) and WebSocket rooms that push the updated scorecard to every viewer of a match.
- **Added profile-photo storage on AWS S3**: the backend validates each upload (5 MB cap, real-image check), strips EXIF/GPS data, re-encodes it to a 512×512 WebP, stores it under a unique key with long-lived cache headers, and deletes the file if the database update fails.
- **Grounded Gemini scouting reports** in structured match data through a RAG pipeline; connected CREASE to SENTRI over Kafka so its errors flow into central log triage.

TECHNICAL SKILLS

Languages	Python, Clojure (JVM), SQL, JavaScript, C++
Backend	FastAPI, Node.js / Express.js, REST APIs, Apache Kafka, PGSync, WebSockets, Event-Driven Microservices
Data	PostgreSQL, Elasticsearch / OpenSearch, ChromaDB (vector DB)
Applied AI	LangGraph, Retrieval-Augmented Generation (RAG), Embeddings, Gemini API
Cloud & DevOps	AWS (S3), Docker, Linux, Git, GitHub Actions (CI/CD)
Frontend	React.js, Re-frame, TypeScript, HTML/CSS
Practices	Design Patterns & SOLID, AI-Assisted Coding

EDUCATION

SSN College of Engineering, Chennai — B.Tech, Information Technology (CGPA 8.03/10) 2021 – 2024
Thanthai Periyar E.V.R. Govt. Polytechnic, Vellore — Diploma, Electronics & Comm. Engg. (95.30%) 2019 – 2021

OTHER

- **200+ DSA problems** solved across LeetCode and GeeksforGeeks.
- **Hourly Test Tracker** (github.com/GokulAjithV/hourly-test-tracker) — Node.js / Express app built for a friend's work at a manufacturing company (Salcomp) to track hourly production test results.
